DETAILED ACTION

Claims 1-32 are pending.

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

The individual “MBM” listed in Table1: CaMKIIg, CNK, FLJ22055, FZD7, GSK3B, HIPK3, KIT, MAPK1, MAPK10, LOC160848, MAPK6, MAPK4, NEK4, NTRK2, PDK4, PKMYT1, PRKACB, PRKACA, PRKCA, PRKCD, PTK9L, PTK9, RAF1, STK24, STK25, STK38L, STK38, LOC220231, TLK2, CDC7L1, and PRKACG.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Each of the species recited above reads on all of the claims.

The following claim(s) are generic: 1-32.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The specification states that MBM nucleic acids and

Art Unit: 1643

polypeptides that can be used in the invention are shown in Table 1. Hence, when given the broadest reasonable interpretation, the MBM polypeptides and nucleic acids are not confined to those listed in Table 1. Accordingly, the prior art anticipates the instant invention. For example, Schuger et al (Development, 1996, Vol. 122, pp. 1759-1767) disclose a method wherein epithelial or mesenchymal extra-cellular matrices were contacted with cells expressing amphiregulin. Schuger et al disclose that the type of extracellular matrix influenced the epithelial cell growth, and in addition antibodies which bound to amphiregulin inhibited branching morphogenesis as well as heparinase and heparitinase (pages 1761-1763, under the heading of "Results"). Therefore, because claims 1, 4, 8, 10, 11 and 26 are anticipated by Schuger et al, the instant invention lacks Unity of Invention because the claims have no special technical feature which is novel over the prior art.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
